## ABOUT ME

Junior full-stack developer with experience of designing, developing and maintaining mobile and web applications as a freelancer. Specializes in spring boot - react development stack. I use spring boot for building the back-end and react native or react (next, remix) for the front-end depending whether it is a mobile or a web application.

## EXPERIENCE

**Altek Technologies - 2022**
*Front-end Internship*
An internship for two month this time working on the front-end of a web application using nextjs and tailwind css.

**Altek Technologies - 2021**
*Front-end Internship*
An internship with the duration of one month in altek technologies working with front-end technologies.

## EDUCATION

**2023**
*ENS Tetouan*
**Licentiate Degree**

My Professional Licentiate Degree in Software and Web Developement in 2013 in "ENS Tetouan.

**2022**
*Lycee IbnSina*
**BTS Degree**

Studied computer science and got the "Brevet de Technicien Supperieur" deploma in "Developement des systems d'information".

**2019**
*Lycee Alwahda*
**High School Degree**

Got my high school degree in physics science in 2019.

## PROJECTS

**Vivo energy maroc**
I had the chance to work with a great team on a project called Vivo Enery Maroc. My role was to build the UI for the mobile app using **React Native** and **Styled Components**, and a web version using **NextJS** and **TailwindCSS**. Through this project, I was able to explore **Firebase** and many tools.

**Lmaalem**
A mobile app for services providers in Morocco. Assigned to me as a freelance job, I was responsible for the entire process. **Spring boot** and a **mysql** database are used to build a *Rest API* on the backend.
And the front end is a React Native mobile application.

**Lkora**
*Open source* is our source of learning, therefore it is important for all of us to contribute to it. I decided to develop an app that displays football match stats using the *SofaScore public API*. Building the UI using **React Native** and **Styled Components** and making it completely open source on my Github.

**Khabiry**
DDuring my time as an intern with Altek technology, The task of building a user interface for Khabiry was given to me, and I used **NextJS, TailwindCSS, Typescript** and other tools based on a Figma design. I learned a lot of new skills from this project because it was my first time using nextjs.

**Get Fed**
My final project for my studies. Consists of a web application built with **Hilla framework**, which combines **Spring Boot** and **React** into one code base, insuring *type safety* and *rapid development time*. The application was both a restaurant management system and an online reservation system for eateries.

**Muslim**
Yet another open source mobile application. Using Expo, I created an app that allows people to read Quran and DOA by combining various open source Quran and DOA JSON resources. I learned a lot of concepts in mobile development through this app.
